

How to Use Ini Translator

1. Download and install the ini translator.
Download Path:
http://www.sothinkmedia.com/download/temp/initrans19052_full.zip
2. Launch Ini Translator.
3. Choose File > Open Original, set file of type as All supported files; Encoding as Unicode.
4. Open the en.ini file and your-language ini file IN TURN under the language category, like de.ini, fr.ini, zh-cn.ini, etc. (In this way, there should be two columns of stings in the tool, the left is in English, while the right should be in your language, what you have to do is translate the blank stings.)
5. Work on it and save. Choose View > Next Untranslated to check the newly added strings which was not being translated.
6. Run the test version to check the result. Choose View > Language to see your translation.
7. Correct the error if needed.

Note:

If the OS of your machine is Vista or Win 7, and UAC function is being turned on, please copy the ini file to other category except C:\Program Files, and then open it in ini translator and work on it. Or, the translated file might not be able to be saved for the permission problems.
